Mike – Skills CV

A living CV for employers, reachable by QR code. It tracks skills growth and how they are applied professionally and personally.

Skills gained gained

- Decision log and build planning (Artheria web app project)
  Nov 3–8, 2026
- Dashboard pipeline design across Claude Projects
  Nov 3–8, 2026
- Per-build analysis
  Nov 3–8, 2026
- Phone and PC data sync with a scoped access token (Garage Health)
  Nov 6–8, 2026

Skills in progress needed

- Build, then explain, code modules
  Started Nov 2026
- Hand-build a feature without AI
  Started Nov 2026
- Record debug logs
  Started Nov 2026
- Marketplace deployment
  Started Nov 2026

Shipped builds

- Artheria 3D Lore Game
- Garage Health, a car maintenance app
  Built Nov 6–8, 2026 · AI-generated with Claude, directed by me

- What it does: tracks parts, service history and inspections on a 3D model of the vehicle, and reads OBD-II data from an ELM327 adapter.
- Runs on any system: in the browser, as an installable PC app, and as an Android app.
- My part: I set the scope and priorities, reviewed and merged the changes, set up the private data repo and a fine-grained token, and confirmed that records sync between my PC and phone.
- Status: deployed for my own use. Not security-reviewed or hardened, so it is not ready for other users.
- Proof: public code repo with dated commits. Build discussion is kept in Claude Projects and can be shown on request.

Meditation Pulse

Process

Tailored app ideas

Multi-LLM prototyping

Iterative commits and PRs

Cross-platform browser deploy

Small low-poly files

Field testing across browser, exe and apk
